Abstract

There is disclosed a method and a device for generating distributed applications for each level in a multi-level database environment, comprising:

- receiving an integrated configuration code comprising code sections for all information required for generating an application in each of said levels,
- parsing all code sections in said integrated configuration code required for at least one level of said multi-level environment,
- extracting said parsed code sections for said at least one level, and
- converting said extracted code sections into level-specific application code for each extracted level.
